

Video & Audio Graphics: Example of Overlay Specs

- Information appearing on the audio-video must be continuous and run simultaneously by computer generated transparent digital information.
- Digital information will be as follows:
 1. Upper left corner
 - a) Name of Contractor
 - b) Day, date and time
 - c) Name of Project
 2. Lower left corner
 - a) Route of travel
 - b) Viewing side
 - c) Direction of travel
 - d) Stationing
- Time must be accurate and continuously generated.
- Engineering station numbers must be continuous, be accurate and correspond to project stationing. The symbols should be the standard engineering symbols (i.e. 16+64).
- Written documentation must coincide with the information on the audio-video so as to make easy retrieval of locations sought for at a later date.
